TYPE 1000 DESCRIPTION

The Type 1000 Transducer is an electro-pneumatic device that reduces a supply pressure to a regulated output pressure directly proportional to an electrical input signal. The Type 1000 accepts a wide range of supply pressures, ranging from a minimum of 3 psig (0.2 BAR) above the maximum output up to 100 psig (6.9 BAR). An integral pneumatic volume booster is included in the design to provide high flow capacity (up to 12 SCFM/339 slpm). Model selections include general purpose, NEMA 4X Type, extended range, high relief, intrinsically safe, and explosion proof.

APPLICATIONS

The Type 1000 Transducer converts an electrical signal to a pneumatic output which can be used to operate the following:

• Valve actuators
• Damper and louver actuators
• Valve positioners
• Controllers
• Relays
• Air cylinders
• Clutches & brakes

USED IN:

• Liquid, gas and slurry processing instrumentation
• HVAC systems
• Paper handling controls
• Textile processing systems
• Energy management systems
• Petrochemical processing systems

STANDARD FEATURES

• Low Cost
• Built-in Volume Booster
• Small Size
• Field Reversible
• Low Air consumption
• Mounts at Any Angle
• Convenient External Span & Zero Adjusts (Except for Explosion Proof Models)
• Light Weight
• Wide Supply Pressure Range
• Low Supply Pressure Sensitivity

PRINCIPLE OF OPERATION

The Type 1000 Transducer is a force balance device in which a coil is suspended in the field of a magnet by a flexure. Current flowing through the coil generates axial movement of the coil and flexure. The flexure moves against the end of a nozzle, and creates a back pressure in the nozzle by restricting air flow through it. This back pressure acts as a pilot pressure to an integral booster relay. Consequently, as the input signal increases (or decreases, for reverse acting), output pressure increases proportionally. Zero and span are calibrated by turning easily accessible adjusting screws on the front face of the unit. The zero adjusting screw causes the nozzle to move relative to the flexure. The span adjusting screw is a potentiometer that limits the current through the coil. A thermistor circuit in series with the coil provides temperature compensation.

SPLIT RANGING

The 4-20 mA input, 3-15 psig output model can be recalibrated to provide 3-9 psig or 9-15 psig output, for split ranging applications.

MOUNTING

The Type 1000 transducers can be pipe, panel, or bracket mounted in any position. Positions other than vertical will require recalibration of the zero adjustment. For maximum output pressure stability, the Type 1000 should be mounted in a vibration-free location or such that vibration is isolated to the X and Z axis shown on the dimensional drawings.

FIELD REVERSIBLE

All Type 1000 transducers are calibrated at the factory for direct acting operation but may be used in the reverse acting mode by reversing the polarity of the signal leads and recalibrating. When calibrated for reverse acting applications, the Type 1000 transducers provide a minimum of their full rated output pressure (i.e., 15, 27, or 30 psig) upon input signal failure.

TYPE 1000 FOR EXTENDED RANGE DESCRIPTION

The Bellofram Extended Range I/P and E/P Transducers are based on Bellofram’s proven Type 1000 transducer line - the best selling transducers in the business. The large span adjustment range of this line allows recalibration to fit applications with output ranges from approximately 3-35 psig (0.2-2.4 BAR) to 3-145 psig (0.2-10 BAR). The units accept supply pressures up to 150 psig (10.5 BAR) and provide flow capacity to 24 SCFM (677 slpm).

The Type 1000 I/P and E/P Transducers are more cost effective and more accurate than typical high output systems using transducers coupled to boosting or multiplying relays.

TYPE 1000 WITH HIGH RELIEF DESCRIPTION

Expanding upon the proven accuracy, reliability, and rugged construction of the Type 1000 General Purpose, these transducers provide extra fast “blowdown” for a very rapid release of downstream pressure. The extra relief feature makes these units suitable for cylinder return stroke actuation, air hoists, and similar applications requiring fast exhaust. These units accept supply pressures to 100 psig (6.9 BAR), with output ranges from 1-17 psig (0.07-1.2 BAR) to 6-30 psig (0.4-2.1 BAR), and provide exhaust capacities of 7 SCFM (336 slpm).
The Type 1000 has long been a standard in the I/P & E/P industry. With a built-in booster, the T-1000 provides a flow capacity up to 12 SCFM, making it a versatile transducer for many applications.

### Options and Accessories:
- Explosion Proof Mounting Kit: 971-079-000
- Explosion Proof Panel Mounting Kit: 971-078-000
- DIN Rail Kit: 010-115-000
- Hirschman Connector Kit (3-prong): 971-126-000
- Filter Kit, Coalescing, 0.1 micron: 010-140-000
- Filter Kit, (for coalescing filter, package of 10): 010-141-000
- Output Gauges: Option "8" ie: last 3 digits become - 008
- Dielectric Strength Testing: Option "12" ie: last 3 digits become - 012
- NEMA 4X Type Enclosure Option: Option "4" ie: last 3 digits become - 004

### Agency Approval Notes:
1. The Type 1000 explosion-proof transducer has been submitted, tested, and approved by Factory Mutual Research for use in hazardous locations for Class I, Division I, Group D, Class II, Division I, Groups E, F, & G and Class III requirements. It has also been approved to meet NEMA 4 outdoor requirements.
3. Factory Mutual Research Approved as intrinsically safe for Class I, II, III, Division 1, Groups A, B, C, D, E, G when installed in accordance with interconnection diagram No. 541-000-012 and with the proper energy limiting barriers.
4. Factory Mutual Research Approved as non-incendive for Class I, Division 2, Groups A, B, C, D, and suitable for Class II and III, Division 2, Group G. Barriers are not required for non-incendive rating.
5. Canadian Standards Association certified as intrinsically safe when connected through certified diode safety barriers in accordance with Bellofram installation instruction 541-000-012. 

Explosion proof, intrinsically safe, and non-incendive ratings are not affected by recalibrating for split range or reverse acting applications.

The Bellofram T-1000 Transducers were tested and found to comply with the relevant EMC specifications tested were the following: EN 50081-1 (1992) and EN 50082-1 (1992). A Technical Construction File, Serial #107 was written and Certificate of Conformity issued by a Competent Body.

**Filter Note:**
Bellofram specifies the use of instrument quality air (clean, dry, oil-free) for all transducers. The use of filters in the supply air system is highly recommended. Contact us for information on our filters and filter regulators.

*For output pressures less than 3 psi or greater than 30 psi the Type 1000 transducer can be coupled to Belofram Type 75 pneumatic relay. Consult application engineers for further information.
DESCRIPTION
The Type 1001 is a patented family of electro-pneumatic instruments that is used to reduce a supply pressure to a regulated output pressure which is directly proportional to a two-wire current or three-wire voltage input. This design incorporates closed loop sensing of the output pressure to achieve excellent accuracy and vibration stability. It also features a unique damping circuit which can be adjusted to prevent overshoot and actuator “hunting.” Model selection includes General Purpose (NEMA 1), Rainproof (NEMA 3R), and Watertight/Corrosion Resistant (NEMA 4X). NEMA 4X models are also explosion-proof, and all models are intrinsically safe.

FEATURES
- 0.1% accuracy typical
- Closed loop pressure feedback control minimizes effects of vibration, temperature, supply pressure and mounting angle
- Built-in volume booster provides flows up to 12 SCFM
- Easy access zero and span adjustment
- Damping pot prevents overshoot and “hunting”
- Low air consumption
- Mounts at any angle (NEMA 3R limited)
- Compact and lightweight
- Virtually no sensitivity to supply pressure changes
- Removable orifice (screw) for easy maintenance

APPLICATIONS
The Type 1001’s precisely regulated pneumatic output can be used to operate:
- Valve actuators
- Louver and damper actuators
- Valve positioners
- Relays
- Clutches and brakes
- Controllers
- Air cylinders

Industry Applications Include:
- Liquid and gas processing
- Pulp and paper
- Petrochemical processing
- HVAC systems
- Textile productions
- Energy management
- Environmental control
- Medical equipment

CALIBRATION ADJUSTMENTS
The Type 1001 contains multi-turn Zero and Span adjustment potentiometers which are accessible on NEMA 1 models by sliding the cover window open to its first detent position. Pots are clearly distinguished by legend on the cover. On NEMA 3R and 4X models, the cover should be removed to reach the pots (marked Z for zero and S for span).

Adjust the pots clockwise to increase Zero and Span as required to optimize factory set output with appropriate input signal and supply pressure applied.

DAMPING ADJUSTMENT
To eliminate undesirable system oscillation, the Type 1001 features a unique damping adjustment. The output response is optimized to varying downstream volumes by adjusting the feedback time constant of the coil drive amplifier. This is accomplished on NEMA 1 models by sliding the cover window open to its second detent position to expose the single-turn Damping Potentiometer (remove the cover on NEMA 3R and 4X models). To optimize response, turn the pot fully counterclockwise until system oscillation is just eliminated. System oscillation may be observed by monitoring output pressure or by observing the behavior of directly actuated system components in response to a changing input.

MOUNTING
The Type 1001 transducers are designed to be position insensitive. They can be panel, valve, or pipe mounted at any angle (see NEMA 3R limitation) without a need for in place recalibration. Panel mounting can be either direct or with the bracket furnished with each unit. Mounting holes are located on the bottom and side to provide maximum mounting flexibility. Users may order the optional DIN Rail Adapter or a bracket suitable for either valve or 2” pipe mounting. Special pipe clamps may be ordered as a separate kit.

HAZARDOUS AREA & USAGE CLASSIFICATION
All 1001 units are approved by Factory Mutual and CSA as intrinsically safe for Class I, Division 1, Groups A, B, C, D hazardous locations. General Purpose (NEMA 1). The General Purpose series of transducers are intended for normal, non corrosive applications and environments. Cover is molded in high impact ABS plastic.

Rain proof (NEMA 3R). These models can be used outdoors, to ensure protection from moisture. The tamperproof cover screws require a special drive bit (p/n AT1-648-000-398), which is furnished with the product.

Watertight & Corrosion Resistant (NEMA 4X). This series of transducers has been certified by Factory Mutual Research as meeting NEMA 4X requirements (water tight, dust tight, and corrosion-resistant). The NEMA 4X is suitable for Class III, Divisions 1 and 2. Equivalents to the approvals previously described have also been obtained from the Canadian Standards Association.
**SPECIFICATIONS**

- **Accuracy (per ISA 51.1):**
  - ± 0.10% of output span, typical
  - ± 0.25% of output span, maximum (Guaranteed)

- **Hysteresis:**
  - 0.01% of output span, typical
  - 0.10% of output span, maximum

- **Dead Band:**
  - No effect

- **Repeatability:**
  - 0.01% of output span, typical
  - 0.10% of output span, maximum

- **Ambient Temperature Effect:**
  - ± 0.004% of nominal span per °F, typical
  - ± 0.022% of nominal span per °F, maximum

- **Span:**
  - ± 0.013% of calibrated span per °F, typical
  - ± 0.022% of calibrated span per °F, maximum

- **Temperature Effect:**
  - ≤ 0.02%/°F, zero and span effects combined

- **Operating Temperature Range**:
  - Buna-N elastomers: -20°F to 160°F (-29 to 71°C)
  - Viton elastomers: 0°F to 160°F (-18 to 71°C)

- **Storage Temperature Range**:
  - Buna-N elastomers: -40°F to 200°F (-40 to 93°C)
  - Viton elastomers: -15°F to 200°F (-26 to 93°C)

- **Vibration Effect**: Less than 0.5% of span per 1G, 5-2000 Hz, 3G maximum, 3 axes

- **Mounting Position Effect**: Not measurable

- **Loop Load, I/P Transducer**: Less than 10 VDC drop at 20 mA
  - Less than 12 VDC drop at 50 mA

- **Supply Voltage, E/P Transducer**:
  - Intrinsically Safe/Nonincendive: 9 VDC to 28 VDC, less than 20 mA
  - General Purpose: 9 VDC to 40 VDC, less than 20 mA

- **Supply Voltage Effect**: No effect

- **Signal Impedance, E/P Transducer**: 6000 Ohm minimum

- **RFI/EMI Effect (NEMA 4X)**:
  - Less than 0.25% of span change in output
  - 10V/meter, 20-1000 MHz.
  - (Reference SAMA PML 33.1-1978, 2-abc)

- **Supply Pressure Sensitivity**: No effect

- **Air Consumption**: 0.07 SCFM (2 LPM) maximum

- **Supply Pressure*: 100 psig (6.9 BAR) maximum

- **Port Sizes**: Pneumatic: 1/4" NPT
  - Electrical: 1/2" NPT

---

* For models with zero output capability maximum supply pressure = 40 psi (2.8 BAR)
  above maximum output, except for 0-100 PSI and 0-120 PSI models that have a maximum supply pressure of 130 psi (9 BAR) & 140 psi (9.7 BAR) respectively.

Bellofram specifies the use of instrument quality air (clean, dry, oil free) for all transducers. Transducer should be used within the following conditions:

- Dew Point = 35°F (2°C)(indoor);
- Oil Content = < 1ppm;
- Particles = 3µm.

The use of filters in the supply air system is highly recommended. Contact us for information on our filters and filter regulators.
### Type 1001 Ordering Information

|   | 06 | - | - | 0 | 67 |

### Options
- 00 = None
- 06 = Fluorocarbon Elastomeric Diaphragm

### Agency Approvals
- 0 = None
- 1 = Factory Mutual & CSA Explosion Proof

### Calibration
See Input / Output matrix below.

### Enclosures
- 6 = NEMA 1, General Purpose
- 7 = NEMA 3R, Rainproof
- 8 = NEMA 4X, Water-tight, Dust-tight, Corrosion Resistant, Explosion-Proof

### Notes to Nomenclature:
1. Transducer operating in the voltage mode (E/P), can be adjusted with the “span” potentiometer for any input between 0-10 VDC. The input range is limited to a minimum 4VDC difference between 100% and 0% Input voltage.
2. Standard NEMA 1 enclosure is conversion coated only. Standard NEMA 3R and NEMA 4X enclosures are epoxy painted.

---

T-1500 I/P & E/P TRANSDUCERS

T-1500 I/P TRANSDUCER

PRINCIPLE OF OPERATION

(see Fig. 2 & 6)

The T-1500 Transducer is a force balance device in which a coil is suspended in the field of a magnet by a flexure. Current flowing through the coil generates axial movement of the coil and flexure. The flexure moves against the end of a nozzle and creates a back pressure in the nozzle by restricting air flow. This back pressure acts as a pilot pressure to an integral booster relay. Consequently, as the input signal increases (or decreases for reverse acting), output pressure increases proportionally.

In the zero based T-1500, the output of the transducer section is routed to an integral negative bias booster relay. The bias relay allows the complete unit to regulate output pressure down to 0 psig/BAR. The bias relay also amplifies the output of the transducer which allows the zero based units to regulate higher output pressures than the standard T-1500.

Zero and Span are calibrated by turning easily accessible adjusting screws on the front face of the unit (see Figures 3, 4, 5, 7, 8 & 9). The zero adjustment causes the nozzle to move relative to the flexure. The span adjustment is a potentiometer that limits the flow of current through the coil. A thermistor circuit in series with the coil provides temperature compensation.

APPLICATIONS

The T-1500 transducer can be used as an electro-pneumatic control device to operate:

- Valve actuators
- Valve positioners
- HVAC systems
- Material handling systems
- Paper handling controls
- Automation systems
- Liquid and gas processing systems

MOUNTING

The T-1500 can be mounted at any angle but should be calibrated after mounting. For maximum output pressure stability, the T-1500 should be mounted vertically in a vibration free location or such that the vibration is isolated to the X and Z axis. The T-1500 can be in-line, panel, pipe, DIN rail or manifold mounted.

AIR CONNECTIONS

1. Supply Air must be instrument quality air regulated between 5 psi above maximum output pressure up to 120 psig / 8.3 BAR (See table: Supply Pressure Range).
2. Instrument-quality air consists of:
   a. A dew point less than 35º F
   b. No particles larger than three microns
   c. Maximum oil content of 1 ppm
3. All unused ports must be plugged.

SUPPLY

Connect supply to either of two ports marked “IN” on the base of the transducer. Avoid getting pipe sealant inside the piping or transducer.

OUTPUT

Connect output to either of two ports marked “OUT” on the base of the transducer. The second “OUT” port may be used for a pressure gauge.

T-1500 MANIFOLD & ADAPTER KIT

PRINCIPLE OF OPERATION

The T-1500 manifold assembly allows multiple T-1500 Transducers to be mounted in parallel. This minimizes the number of individual supply air lines required. Manifolds are available to hold three, five, or ten units. Each manifold comes with check valves so that a unit can be pulled off of the manifold for service or replacement without affecting the whole manifold. (See Figure 1.)

MOUNTING: The manifolds may be mounted flush with a wall or cabinet or may be mounted away from the wall. Both mounting options are included in the basic manifold kit. In addition, all fittings required to mount the full number of units in each manifold are included in the basic kit. An additional adapter kit may be purchased which contains all of the hardware required to manifold mount a single T-1500 Transducer should the need arise.

AIR SUPPLY ATTACHMENT: The air supply can be attached to either side of the manifold via a 3/4” NPT connection or to the back of the manifold via a 3/8” NPT connection. After an air supply port is selected, the open ports should be plugged using the plugs provided with the manifold kit and a pneumatic sealant.

OUTPUT AIR ATTACHMENT: Connect the output ports from each of the T-1500 Transducers to the bottom or back of the manifold. After connecting the transducers, plug the other 1/8” NPT ports using the plugs provided and a pneumatic sealant.

T-1500 MANIFOLD ADAPTER KIT: The T-1500 manifold kit includes the adapter kits required for each transducer.

ELECTRICAL CONNECTIONS: Two brackets supplied with the manifold kit allow an electrical conduit to be attached to the manifold. Mounting screws and nuts are provided, and the brackets have an 11/64” diameter hole which will fit standard 8-36 UNF or 8-32 UNC screws (not supplied).

FIGURE 3 - TERMINAL BLOCK

FIGURE 4

FIGURE 5 - 1/2" NPT / BSPT
FACTORY MUTUAL & CSA

NEMA/TYPE 4X: The T-1500 Transducers, NPT, BSPT, Hirschmann models are rated intrinsically safe by FM & CSA for:

- DUST-PROOF FOR CLASS II, DIV 1, GROUP E,F,G.
- SUITABLE FOR CLASS III LOCATIONS.

Warning: These ratings are valid ONLY WHEN the cover is fully installed, and the electrical connections conform to required standards.

INDOOR USE / GENERAL PURPOSE:

T-1500 model transducers are rated intrinsically safe by FM & CSA for:

- CLASS I, DIVISION 1, GROUPS A, B, C, D HAZARDOUS LOCATIONS.

ENTITY PARAMETERS

V_{max} = 30 VDC, I_{max} = 100 mA

(Ci = 0 uF, Li = 0 mH T4 Max. Ambient 70°C.

(V_{oc} and I_{sc} of a barrier shall not exceed V_{max} and I_{max} of the transducer.

(Li + Wiring) and (Ci + Cwiring) shall not exceed La and Ca of a barrier.

NON-INCENDIVE: The T1500 Transducer is approved as non-incendive by FM & CSA for:

- CLASS I, DIVISION 2, GROUP A, B, C, D HAZARDOUS LOCATIONS.

A barrier is not necessary when the T-1500 Transducer is in any of these locations.

ATEX

Intrinsically safe for II 2 G Ex ia IIB T4 Tamb = -20 to 65°C

Input Parameters: V_{max} = 30V, P_i = 18, I_{ii} = 100 mA, Req = 180 OHMS, Ci = 0, Li = 24mH

Models are CE marked for use in the European Union, and meet the EMC heavy machinery directives.
The Type 2000 I/P and E/P transducers utilize closed-loop pressure feedback-control for precision pressure output and minimized effects of temperature, supply pressure changes, supply voltage changes, and mounting angle.

Supply pressure is reduced by the supply valve to provide an output pressure which is internally routed to a precision temperature compensated piezo-resistive pressure sensor. Supply pressure is also routed to an externally removable orifice which provides a reduced pilot pressure to a chamber containing a servo diaphragm and nozzle. Pilot pressure is controlled by modulating the gap between the face of a nozzle and an adjacent piezo-ceramic actuator, which is part of a unique patented mechanism.

The piezo-ceramic actuator serves as a control link between electrical input and pressure output as follows:

- The input current (I/P) or voltage (E/P) signal is conditioned to provide a normalized control signal directly proportional to the desired pressure output.
- Simultaneously the output of the pressure sensor is amplified and conditioned to produce a feedback signal.
- The sum of the control signal and the feedback signal produce a command signal which is delivered as a DC voltage to the piezo-ceramic actuator.
- As voltage increases, the force applied by the actuator increases, so as to restrict nozzle bleed and thus increase pilot pressure.
- Increased pilot pressure applied to the servo diaphragm directly causes opening of the supply valve and an increase in the output pressure until the output feedback signal and control signal combine to produce the correct command signal.

DESCRIPTION

The Marsh Bellofram Type 2000 is a robust electronic instrument that regulates an incoming supply pressure down to a precise output pressure which is directly proportional to an electrical control signal. The secret to the Type 2000’s precise, reliable performance under a variety of demanding environmental conditions is a patented piezo-ceramic actuator with many industry-wide firsts.

The Type 2000 has been designed to meet the electropneumatic needs of the world:

- Field-selectable inputs and direct/reverse/split ranging
- Multiple input/output/mounting configurations
- Precise, reliable performance under extreme conditions of temperature, vibration, orientation, supply pressure changes, supply voltage changes, RFI/EMI, humid / oil-laden media, and corrosive surroundings

APPLICATIONS

The Type 2000’s precisely regulated pneumatic output can be used to operate:

- Valve actuators
- Louver and damper actuators
- Valve positioners
- Relays
- Clutches and brakes
- Controllers
- Air cylinders

INDUSTRY APPLICATIONS INCLUDE:

- Chemical & Petrochemical Industries
- Petroleum production
- Pipeline Transmission
- Electric Utilities
- Water & Wastewater Systems
- Pulp & Paper
- Textiles
- Semiconductor Industry
- Food & Beverage
- Environmental Control Systems
- Construction Equipment
- Agricultural Equipment
- Machine Tool
- Material Handling
- Automotive Testing & Assembly
- Medical Equipment
FINE-TUNING YOUR APPLICATION
For optimal performance in your application, the calibration of the Type 2000 can be fine-tuned in the field. An easily-removable cover provides access to the isolated electronics. All potentiometers, connections, jumpers, and switches are clearly marked on the circuit board or on the handy chart located on the inside of the cover. The three elements of calibration (Gain, Zero, and Span) are described below. Consult the Type 2000 User’s Manual for detailed calibration procedures, cautions, and instrumentation requirements.

GAIN (DAMPING) ADJUSTMENT
The response of the Type 2000 can be optimized for varying downstream volumes by adjusting the system gain of the control circuit. Adjust the Gain Pot counterclockwise for increased gain; clockwise for increased oscillation damping. For maximum allowable gain in your application, the pot should be turned clockwise until oscillation just disappears.

ZERO & SPAN ADJUSTMENTS
The Type 2000 contains multi-turn Coarse-Zero, Fine-Zero, and Span adjustment potentiometers which are clockwise positive. Adjustment of either Zero Pot changes the unit’s minimum output while the Span Pot changes the maximum output. The adjustments are interactive, so it may take iterations to reach the desired calibration.

WIDE RANGEABILITY
The Type 2000 can be field calibrated to pressure ranges other than the standard ones by combinations of recalibration, pressure range switching, and split high/low ranging. A unit should not be switched to a range outside its pressure sensor family (e.g., a 0-15 psig can be switched to a 3-15 psig, but not to 0-30 psig). (Caution: Do not exceed the range of the onboard pressure sensor.) For example, the easiest way to recalibrate a 0-30 psig unit to 3-15 psig would be to change the switch setting to 3-27 psig, then switch to split range low.

FIELD-SELECTABLE FEATURES
Onboard switches allow the user to easily reconfigure the Type 2000 for any of several electrical inputs, direct/reverse acting, or output split-ranging high/low. Fine tuning of the unit’s calibration may be necessary after a reconfiguration.

DIRECT/REVERSE ACTING
Direct Acting transducers regulate to their minimum output when supplied with minimum input; maximum out with maximum in. Reverse Acting transducers regulate to their maximum output at minimum input.

SPLIT RANGING
HIGH & LOW
The Type 2000 can be configured to regulate either half (top or bottom) of its normal output range, when supplied with its normal full-ranging electrical input. For example, a 0-10V 0-30psi unit set to split range low will regulate 0-15psi @ 0-10V. It will regulate 15-30psi @ 0-10V if set to split range high.

HAZARDOUS AREA & USAGE CLASSIFICATION
INTRINSIC SAFETY: (I Enclosure) Factory Mutual approvals: Class I, II, and III, Divisions 1 and 2, Groups A through G. ATEX Approvals: Ex ia IIC T4 (-20˚C<Ta<+60˚C)

NEMA 4X / IP66: (Conduit and Hirschmann Connectors only) Water tight, dust tight, and corrosion resistant.

EXPLOSION PROOF (E Enclosure; N Electrical Port; G Agency Approval) Certified to CSA standards. Class I, Division 1, Groups C and D, T3. Exia IIB Ci=0, Li=0, 24VDC, 25MA. Meets the requirements for CSA Class I Division 1, Group D gas use, including natural gas as the media flowing through the transducer.

CE (CONDUIT CONNECTOR ONLY): (Conduit Connector Only) EN 50081-1 Residential, commercial & light industry; EN-50082-2 Heavy Industrial.

EASY ACCESS TOP COVER
1) Isolated electronics
2) Calibration adjustments

MOUNTING: The Type 2000 can be mounted in-line, or directly to a panel via mounting holes located in the side and bottom of the unit. In addition, the S model includes a panel-mounting bracket; while the E model includes a valve-mounting bracket. Kits are available for mounting of either model to panel, valve, pipe, or DIN-Rail. A custom plate is available for mounting of the bottom-ported version to a manifold. (See Accessories)

**TYPE 5000 P/I TRANSDUCERS**

**FEATURES**
- 0.1% accuracy typical
- Piezo resistive pressure sensor resists vibration
- Mounts at any angle
- Easily accessible zero and span adjustments
- NEMA 4X housing approved for explosion proof service

**DESCRIPTION**
The Type 5000 series is a compact, rugged and reliable family of two-wire pressure transmitters designed for industrial field service. These instruments convert a signal pressure input into a precise 4-20 or 10-50mA output. The lightweight transmitter housing includes a 1/4" NPT pressure port and a 1/2" NPT conduit port for field wiring. Connections are easily accessible simply by removing the top cover. Zero and span adjustments are available within the field wiring compartment for fine, on-site calibration adjustment.

The Type 5000 uses a unique, temperature compensated piezo resistive sensor suitable for gauge pressure measurement of non-corrosive liquids and gases. The sensor has excellent dynamic response and is virtually insensitive to mounting orientation and ordinary industrial vibration.

Mounting holes on the transmitter housing are arranged to permit direct pipe (2") mounting for minimum installed cost.

**NEMA 4X ENCLOSURE**
The Type 5000 transducers have been certified by Factory Mutual Research as meeting the requirements for NEMA 4X (water tight, dust and corrosion resistant). The transducers also have Factory Mutual approvals for:

1. Explosion proof service (Class 1, Divisions 1 and 2, Groups B, C and D)
2. Dust ignition proof service (Class II, Divisions 1 and 2, Groups E, F and G)
3. Class III, Divisions 1 and 2. Equivalents to the above approvals have been obtained from the Canadian Standards Association.

**FUNCTIONAL DIAGRAM**

**MAX LOAD RESISTANCE VS. SUPPLY VOLTAGE**
- 4-20 mA Output: $R_I = 50$ ohms / volt
- 10-50 mA Output: $R_I = 20$ ohms / volt
SPECIFICATIONS

Input signal
- 0–15 psig (0–1.0 BAR)
- 3–15 psig (0.2–1.0 BAR)
- 3–27 psig (0.2–1.9 BAR)
- 6–30 psig (0.4–2.1 BAR)
- 0.2–1.0 BAR (3–15 psig)
- 0–100 psig (0–6.9 BAR)

Output Signal
- 4–20 mA DC, 2 wire
- 10–50 mA DC, 2 wire

Output Protections
Reverse polarity protected

Accuracy
± 0.1% span typical; ± 0.25% span max.
includes nonlinearity, hysteresis and non-repeatability

Overpressure
45 psig (3.1 BAR) without calibration shift
60 psig (4.1 BAR) without failure

Allowable Loads
See Graph

Response Time
Less than 10 msec for step change to 99%

Temperature Range-Operating
-40°F to +180°F (-40°C to +82°C)

Temperature Effect
Zero - Less than ± 0.01% R/°F
Span - Less than ± 0.01% R/°F

RFI Effect
Less than 1% R at 10V/meter per SAMA PMC 33.1, 2-abc

Power Supply
12–30 VDC

Power Supply Effect
Less than 0.005% per volt change at the input terminals within specified power supply limits

Calibration Adjustments
Multi-turn Zero and Span potentiometers
with ± 25% min. adjustment

In-Process Output Monitoring
Via test jacks within enclosure without disturbing field wiring

Connections
1/4”– 18 NPT female pressure input,
1/2”– 14 NPT female electrical output

Mounting
Suitable bracket or optional 1/4– 20 U-bolt pipe mounting kit

Finish
Epoxy coated aluminum body and cover

Weight
1.7 lbs. (0.8 kg)

ORDERING MATRIX

INPUT
0 0–15 psig (0–1.0 BAR)
1 3–15 psig (0.2–1.0 BAR)
2 3–27 psig (0.2–1.9 BAR)
3 6–30 psig (0.4–2.1 BAR)
4 0.2–1.0 BAR (3–15 psig)
5 0–100 psig (0–6.9 BAR)

OUTPUT
0 4–20 mA
1 10–50 mA

AGENCY APPROVAL
1 X / P FM/CSA

OPTIONS
00 None
01 Pipe Clamp Mounting Kit
