## PRODUCT OVERVIEW

The 105TX Industrial Network Switch is designed to solve the most demanding industrial communication requirements while providing high throughput and minimum downtime.

The 105TX provides five RJ-45 auto sensing 10/100BaseTX ports. All ports are full/half duplex capable, using "state of the art" Ethernet switching technology. The 105TX auto-negotiates the speed and flow control capabilities of the five TX port connections, and configures itself automatically.

Since the 105TX is auto sensing, there will be no need to make extensive wiring changes if upgrades are made to host computers, plant systems, or Ethernet I/O modules. The switching fabric simply scales up or down automatically to match specific network environments.

The 105TX supports up to 2,000 MAC addresses, enabling these products to support extremely sophisticated and complex network architectures.

The is an ideal candidate for upgrading existing hubs and repeaters to increase bandwidth and determinism by virtually eliminating network collisions. The *N-TRON* 105TX combines affordability and the plug & play simplicity of the unmanaged hub.

The 105TX can simplify plant wiring by eliminating the need to bring data acquisition and control network connections back to a climate controlled environment. The 105TX has extended operating environmental specifications to meet the harsh needs of the industrial environment. For cost savings and convenience it can be DIN-Rail mounted alongside Ethernet I/O or other Industrial Equipment.

To increase reliability the 105TX provides dual redundant power inputs. LED's are provided to display the link status and activity of each port.
